

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application.

**Listing of Claims:**

1. (currently amended) A multi-accessory vehicle audio system comprising:

a plurality of vehicle audio accessories including a music source and at least one device selected from the group consisting of a cellular telephone, a radar detection device, and a geographic designation system, ~~the vehicle audio accessories generating a corresponding plurality of audio signals~~; and

an audio switching device comprising:

an input section adapted to receive ~~the~~ a plurality of signals from the plurality of vehicle audio accessories and to transmit the plurality of audio signals,

a switching section interconnected with said input section;

a controller comprising an instruction set and interconnected with said input section and with said switching section and adapted to receive the plurality of audio signals from the input section, ~~to respond to an instruction set~~, and to produce control signals based upon said instruction set;

wherein said a switching section is adapted to receive the plurality of audio signals from the input section, to receive the control signals produced by the controller, and to produce an output audio signal; ~~and~~

an output section interconnected with said switching section ~~adapted to receive the output audio signal from the switching section.~~

2. Canceled.
3. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a first level music source and a second level music source.
4. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a microphone.
5. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a headset microphone.
6. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a pair of headset microphones.
7. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a wireless communications device.
8. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a general mobile communications device.
9. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the vehicle audio accessories comprise a radar detection system.
10. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein: the vehicle accessories comprise a first level music source and a second level music source; and the input section comprises a switch for switching between the first and second music sources.
11. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein: the vehicle audio accessories comprise a general mobile communications device having a general mobile communications device audio signal and a citizen's band radio having a citizen's band radio audio signal; and the input section includes coupling circuitry for combining the

general mobile communications device audio signal and the citizen's band radio audio signal.

12. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein: the vehicle audio accessories comprise a geographic designation system having a geographic designation system audio signal and a radar detection system having a radar detection system audio signal; and the input section includes coupling circuitry for combining the geographic designation system audio signal and the radar detection audio signal.

13. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the input section includes signal leveling circuitry for leveling the audio signals with respect to one another.

14. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the switching section comprises a plurality of switches.

15. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the switching section comprises a plurality of analog switches.

16. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the controller comprises a programmable controller chip.

17. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein: the vehicle audio accessories comprise a microphone having a microphone audio signal; and the instruction set comprises an instruction for controlling the switching section in response to the microphone audio signal.

18. (previously presented) A multi-accessory vehicle audio system as recited in claim 1, wherein: the vehicle audio accessories comprise a microphone having a microphone audio signal; the input section comprises a microphone audio signal path and a low pass filter in the

microphone audio signal path, the low pass filter having a low pass filter output; the instruction set comprising an instruction for comparing the microphone audio signal with the low pass filter output to obtain a voice difference signal and an instruction for controlling the switching section in response to the voice difference signal.

19. (original) A multi-accessory vehicle audio system as recited in claim 1, wherein the output section comprises a pair of speakers.

20. (currently amended) A vehicle audio system switching device for switching a plurality of vehicle audio accessories including a music source and at least one device selected from the group consisting of a cellular telephone, a radar detector, and a geographic designation system ~~the vehicle audio accessories generating a corresponding plurality of audio signals, the vehicle audio system switching device~~ comprising:

an input section ~~adapted to receive the plurality of signals from the~~ interconnected with said plurality of vehicle audio accessories ~~and to transmit the plurality of audio signals,~~

a switching section interconnected with said input section;

a controller comprising an instruction set and interconnected with said input section and with said switching section ~~and adapted to receive the plurality of audio signals from the input section, to respond to an instruction set,~~ and to produce control signals based upon said instruction set;

wherein said a switching section is adapted to receive the plurality of audio signals from the input section, to receive the control signals produced by the controller, and to produce an output audio signal; ~~and~~

an output section interconnected with said switching section ~~adapted to receive the~~

output audio signal from the switching section.

21. (original) A vehicle audio system switching device as recited in claim 20, wherein: the vehicle accessories comprise a first level music source and a second level music source; and the input section includes a switch for switching between the first and second music sources.

22. (original) A vehicle audio system switching device as recited in claim 20, wherein: the vehicle audio accessories comprise a general mobile communications device having a general mobile communications device audio signal and a citizen's band radio having a citizen's band radio audio signal; and the input section includes coupling circuitry for combining the general mobile communications device audio signal and the citizen's band radio audio signal.

23. (original) A vehicle audio system switching device as recited in claim 20, wherein: the vehicle audio accessories comprise a geographic designation system having a geographic designation system audio signal and a radar detection system having a radar detection system audio signal; and the input section includes coupling circuitry for combining the geographic designation system audio signal and the radar detection audio signal.

24. (original) A vehicle audio system switching device as recited in claim 20, wherein the input section includes signal leveling circuitry for leveling the audio signals with respect to one another.

25. (original) A vehicle audio system switching device as recited in claim 20, wherein the switching section comprises a plurality of switches.

26. (original) A vehicle audio system switching device as recited in claim 20, wherein the switching section comprises a plurality of analog switches.

27. (original) A vehicle audio system switching device as recited in claim 20, wherein

the controller comprises a programmable controller chip.

28. (original) A vehicle audio system switching device as recited in claim 20, wherein: the vehicle audio accessories comprise a microphone having a microphone audio signal; and the instruction set comprises an instruction for controlling the switching section in response to the microphone audio signal.

29. (original) A vehicle audio system switching device as recited in claim 20, wherein: the vehicle audio accessories comprise a microphone having a microphone audio signal; the input section comprises a microphone audio signal path and a low pass filter in the microphone audio signal path, the low pass filter having a low pass filter output; the instruction set comprising an instruction for comparing the microphone audio signal with the low pass filter output to obtain a voice difference signal and an instruction for controlling the switching section in response to the voice difference signal.

30. (original) A vehicle audio system switching device as recited in claim 20, wherein the output section comprises a pair of speakers.

31. (currently amended) A method for switching signals in a multi-accessory vehicle audio system having a plurality of vehicle audio accessories including a music source and at least one device selected from the group consisting of a cellular telephone, a radar detector, and a geographic designation system, ~~the vehicle audio accessories generating a corresponding plurality of audio signals;~~ the method comprising:

receiving ~~the a~~ plurality of audio signals at an input section ~~and transmitting the plurality of audio signals from the input section;~~

receiving the plurality of audio signals from the input section at a controller

interconnected with said input section;

producing a control signal at the controller in response to an instruction set;

receiving the plurality of audio signals ~~from the input section~~ and at a switching section

interconnected with said input section;

receiving the control signal from the controller at the switching section; and

outputting ~~the an~~ audio signal from the switching section in response to the received control signal.

32. (original) A method as recited in claim 31, wherein: the vehicle accessories comprise a first level music source and a second level music source; and the method comprises switching between the first and second music sources.

33. (original) A method as recited in claim 31, wherein: the vehicle audio accessories comprise a general mobile communications device having a general mobile communications device audio signal and a citizen's band radio having a citizen's band radio audio signal; and the method comprises combining the general mobile communications device audio signal and the citizen's band radio audio signal.

34. (original) A method as recited in claim 31, wherein: the vehicle audio accessories comprise a geographic designation system having a geographic designation system audio signal and a radar detection system having a radar detection system audio signal; and the method comprises combining the geographic designation system audio signal and the radar detection audio signal.

35. (original) A method as recited in claim 31, further including leveling the audio signals with respect to one another.

36. (original) A method as recited in claim 31, wherein:

the vehicle audio accessories comprise a microphone having a microphone audio signal;

and

the method comprises controlling the switching section in response to the microphone audio signal.

37. (original) A method as recited in claim 31, wherein:

the vehicle audio accessories comprise a microphone having a microphone audio signal;

and

the method further includes passing the microphone audio signal path through a low pass filter to obtain a low pass filter output, comparing the microphone audio signal with the low pass filter output to obtain a voice difference signal, and controlling the switching section in response to the voice difference signal.
